

SPECIAL-OPS DECON SYSTEM

DECON-1 SINGLE-JUG GEAR DECON SPRAYER

DECON-2 DUAL-JUG GEAR DECON SPRAYER

Part of the Special-ops Decon System, the Ram Air Gear Decon Sprayer properly cleans/disinfects hazmat, immersion and ice-rescue suits that cannot be washed in a mechanical washer. Designed with air injection at the nozzle, the sprayer automatically mixes water and gear-cleaning solutions/disinfectants* with air to achieve a foaming action. The foam provides better adhesion to the garment—ensuring saturation time requirements set forth by manufacturers are met and that gear is properly decontaminated. With an extra-long spraying wand and 360-degree spraying, the Ram Air Gear Decon Sprayer allows for spraying in any direction—even upside-down—so hard-to-reach areas of the gear are properly cleaned. The sprayer operates with water pressure of up to 100psi, so it can easily be connected to a standard 3/4" garden hose. A dual-jug model is available for departments that prefer a jug for cleaning solutions and a jug for disinfectants on the same unit. This eliminates the need to manually remove and replace cleaning/disinfection jugs. A simple toggle switch on the sprayer switches jugs. A fire hose adapter is available so the sprayer can be directly connected to a fire or pumper truck—making decontamination of the sidewalk or street following an incident easy.

* Cleaning solutions and disinfectants sold separately.

FEATURES

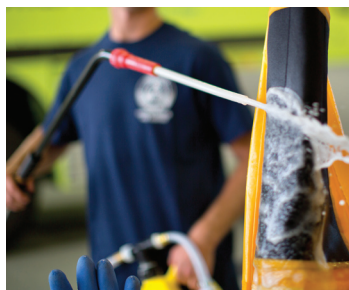

- Air injection at nozzle for foaming action
- Connects to standard 3/4" hose
- Works with water pressure up to 100 psi
- 1% education rate
- Extra-long spraying wand
- 1.25 gallon capacity jug
- Single- or dual-jug models available
- Extra jugs available (model #DECON-JUG)
- Fire hose adapter available

DECON-1
